LETTER OF RECOMMENDATION

To the OIST Research Internship Selection Committee
Okinawa Institute of Science and Technology Graduate University (OIST), Japan

Dear Members of the Selection Committee,

I am pleased to recommend **Khizer Ziaurrehman Ansari**, an undergraduate student in Computer Engineering at Fr. Conceicao Rodrigues College of Engineering, Mumbai, for the OIST Research Internship Program. I have known him through my role as his Database Management Systems instructor during his second year and as his academic mentor.

During his undergraduate studies, Khizer participated in a group project titled *Water Bodies Data Analysis and Visualization* as part of the Technical Innovation and Sustainable Development course. His contributions included researching relevant datasets, cleaning and analysing data, and creating visualizations to communicate insights. This project provided an opportunity to apply data-handling and analytical skills to an environmental sustainability problem.

Beyond his academic coursework, Khizer has actively pursued opportunities to develop his technical skills and engage with the open-source community. During his third year, his proposal for the HumanAI organization in Google Summer of Code 2026 was ranked third in the proposal selection process. He has also pursued contributions to Archi, an open-source RAG framework for research and education by MIT which you can see in his Github , Apart from these he his certified by NPTEL(Government of India) for Research methodology and Patent &Law as he successfully passed these Exams conducted by them.

These activities demonstrate his initiative in exploring technical problems beyond the formal curriculum and his interest in learning through practical, collaborative work. His experience with data analysis, together with his continued engagement in software development and open-source projects, provides a useful foundation for further research-oriented learning.

I believe that the OIST Research Internship Program would offer Khizer a valuable opportunity to strengthen his analytical abilities, gain exposure to interdisciplinary research, and develop the skills needed to investigate scientific problems systematically. I hope that this experience will support his continued academic and research development.

I am pleased to recommend **Khizer Ziaurrehman Ansari** for consideration for the OIST Research Internship Program.

Yours sincerely,

Dr. Sujata Deshmukh
Head of Department, Computer Engineering
Fr. Conceicao Rodrigues College of Engineering, Mumbai
